Cancer pagurus, commonly known as the edible crab or brown crab, is a species of crab found in the North Sea, North Atlantic Ocean, and perhaps the Mediterranean Sea. It is a robust crab of a reddish-brown colour, having an oval carapace with a characteristic "pie crust" edge and black tips to the claws. A mature adult may have a carapace width up to 25 cm (10 in) and weigh up to 3 kg (6.6 lb).

### **The 25 Best Beach Towns in New England from Yankee Magazine**

Most of the caloric intake of hunters and gatherers came from foraging for edible plants, fruits, nuts, berries, and roots. The largely meat-based diet of the Inuit is a notable exception. Richard Lee (1978) estimated that approximately 65% of the hunter-gatherer diet came from plant sources, which had implications for the gender egalitarianism

The moose in North America or elk in Eurasia, (*Alces alces*), is a member of the New World deer subfamily and is the largest and heaviest extant species in the deer family. Most adult male moose have distinctive broad, palmate ("open-hand shaped") antlers; most other members of the deer family have antlers with a dendritic ("twig-like") configuration. Moose typically inhabit boreal forests and

### **Weed - Wikipedia**

Currant bushes (*Ribes*) are thornless understory shrubs, growing in USDA hardiness zones 3-8. They can grow 3-6 feet wide and tall, and can range in color from red, white, pink, or black. There is even a clove currant (*Ribes odoratum*), which is very fragrant. All currants have attractive flowers and maple-like leaves that make them desirable in the edible landscape.

For example, the wettest and darkest June ever recorded (in 2012) killed thousands of nestlings. Only 9 months later, the 2nd coldest March ever recorded killed thousands of adults resulting in a 70% decline in nest site occupancy across Britain. See the State of the UK Barn Owl population 2013.

### **Chlorothalonil | C8Cl4N2 - PubChem**

A weed is a plant considered undesirable in a particular situation, "a plant in the wrong place". Examples commonly are plants unwanted in human-controlled settings, such as farm fields, gardens, lawns, and parks. Taxonomically, the term "weed" has no botanical significance, because a plant that is a weed in one context is not a weed when growing in a situation where it is in fact wanted, and
